News Release

ANGLO INTERSECTS TWO NEW ZONES OF NICKEL, COPPER, PLATINUM GROUP METAL MINERALIZATION ON THE BELANGER PROPERTY

Vancouver, British Columbia ... Goldbrook Ventures Inc. (“Goldbrook”) announces that Anglo American Exploration (Canada) Ltd. (“AAEC”) has reported initial results from the 2005 exploration program on the Belanger and Nuvilik properties in the Raglan district, Northern Quebec. The results include the discovery of two new zones of Nickel, Copper, Platinum, and Palladium (Ni-Cu-PGE) mineralization. At the newly discovered **Timtu** zone, diamond drill hole BEL05-003 intersected 1.01% Ni, 0.63% Cu, 1.81g/t Pd, and 0.57 g/t Pt over a core length of 8.65 metres and at the newly discovered **Pad1** zone, diamond drill hole BEL05-005 intersected 0.85% Ni, 1.49% Cu, 1.14g/t Pd, 0.14g/t Pt over a core length of 24.73m.

During the 2005 exploration season, AAEC completed exploration programs on the Belanger and Nuvilik properties that included geological mapping and prospecting, surficial geochemistry surveys, ground geophysics, and diamond drilling. During the program, a total of 3,885 tills, moss mats, and soil samples were collected, 505 line kilometers of ground magnetic and electromagnetic surveys were completed, and a total of 2700 metres, in 18 diamond drill holes, were completed. The overall objective of the 2005 exploration program completed by AAEC was to conduct a property wide exploration program with the aim of early stage discovery, adding to the zones discovered in 2004, to be tested in detail during subsequent exploration campaigns.

AAEC is in the process of receiving analytical (assay) data, compiling analytical and field data, and completing rigorous QA/QC on all data. To date, AAEC has reported to Goldbrook the results of two validated drill holes. Both holes intersected Ni-Cu-PGE sulphide mineralization in new zones discovered through prospecting during the 2005 exploration program. The results of these holes are summarized in the table below.

HOLE ID	FROM	TO	LENGTH (m)	Ni (%)	Cu (%)	Pt (g/t)	Pd (g/t)	Pt+Pd (g/t)
BEL05-003	25.00	33.65	8.65	1.01	0.63	0.57	1.81	2.38
BEL05-005	6.96	31.69	24.73	0.85	1.49	0.14	1.14	1.28
including	19.64	31.69	12.05	1.12	1.39	0.21	1.10	1.31
including	19.64	20.91	1.27	3.00	0.27	0.18	0.68	0.86
and	25.36	26.44	1.08	2.31	0.38	0.19	1.07	1.26
and	29.70	31.69	1.99	2.07	3.67	0.60	3.41	4.01

Abbreviations and Notes:

All distances (From, To) are down hole distances and width is intersection width
True widths are not known.

Further drill hole results will be released as they are received. Results of the 2005 Belanger/Nuvilik exploration program will be compiled and posted on the Goldbrook website upon receipt of all data and information from AAEC.

Gary DeSchutter, M.Sc. and Senior Project Geologist with AAEC is the Project Manager for the Belanger/Nuvilik project and supervised the exploration program. Jamie Lavigne, P. Geo and Vice President, Exploration for Goldbrook is the Company's qualified person for this project and has prepared and verified the information in this release.

ON BEHALF OF THE BOARD:

(signed) "David Baker," President
