NEWS RELEASE

Correction: Goldbrook Corrects Assay Results from Bravo Target

Correction to the release disseminated yesterday October 29. The composited assay results for interval incl.(1ii), line 3 Table 1, were incorrect.

Vancouver, British Columbia – Goldbrook Ventures Inc. (“Goldbrook”) wishes to correct its news release dated October 29, 2007. In that press release Goldbrook announced that it had intersected 7.0 metres of 2.53% Nickel, 5.32% Copper and 4.99 grams per tonne (gpt) PGE+gold from the Bravo Target on Goldbrook’s 100% owned Raglan property (map available for viewing on Goldbrook website: http://www.goldbrookventures.com/EN/diagram_and_chart/). The actual results are that drill hole BRA07-006 intersected 7.0 metres of 1.79% nickel, 3.49% copper, and 3.54 grams per tonne (gpt) PGE+gold (Table 1).

Table 1. Corrected Composited Drill Assay Results for BRA07-006

Interval	from_m	to_m	Interval_m	Ni_pct	Cu_pct	Co_pct	Pt_gpt	Pd_gpt	Au_gpt	PGE+gold
1	69.0	96.9	27.9	0.67	1.27	0.03	0.279	1.928	0.064	2.271
incl.(1i)	75.0	75.3	0.3	1.54	1.37	0.08	0.826	2.230	0.052	3.108
incl.(1ii)	83.0	90.0	7.0	1.79	3.49	0.09	0.404	2.956	0.175	3.535
2	105.9	106.6	0.7	0.94	0.47	0.07	0.238	4.190	0.010	4.438
3	110.5	111.0	0.5	2.15	0.39	0.11	0.535	3.230	0.004	3.769
4	113.2	113.4	0.2	0.56	8.51	0.66	0.310	79.300	1.920	81.530

True widths are estimated to be approximately 70% of reported core intervals.

These results are the first received from the assay lab for a total of 14 holes drilled this season on the Bravo B4 zone (see map on Goldbrook’s website). The Bravo B4 zone is one of nine mineralized zones in the Bravo area, two of which were drilled this season. The Bravo B4 zone is a large (450 metre by 350 metre size) VTEM anomaly with twelve individual surface gossans.

During the 2007 season Goldbrook drilled 134 holes on six target zones (Bravo, Mystery, Getty, Sylvie, Timtu, and R2) along a 40 km strike length of the Belanger-Delta Horizon. Assay results for these holes will be released as they become available from the assay lab. Nickel-copper PGE mineralization in the Raglan camp occurs in discreet zones over extensive areas, as demonstrated at Xstrata’s Raglan operations and by the Canadian Royalties discoveries. Goldbrook is the

largest claims holder in the Raglan district with interests covering 348,000 hectares (860,000 acres).

The core samples were prepared and assayed by ALS Chemex Laboratories in Vancouver (BC). Assay results for nickel, copper, and cobalt were determined by aqua regia digestion and ICP-AES finish. Platinum, palladium and gold were determined by lead fire assay and ICP-AES finish. Total sulfur was determined by Leco furnace. In addition to quality control by ALS Chemex, Goldbrook inserts Certified Reference Materials, blanks and duplicates into sample batches for independent evaluation.

Dr. Bill Stone, P.Geo., Senior Vice President of Exploration and Development for Goldbrook Ventures Inc. and Qualified Person as defined by National Instrument 43-101, is responsible for the technical content of this press release.

ON BEHALF OF THE BOARD:

(signed) “*David Baker,*” President

The securities have not been and will not be registered under the United States Securities Act of 1933, as amended (the “U.S. Securities Act”) or any state securities laws and may not be offered or sold within the United States or to U.S. Persons unless registered under the U.S. Securities Act and applicable state securities laws or an exemption from such registration is available.

This press release contains “forward-looking information” that is based on Goldbrook’s current expectations, estimates, forecasts and projections. This forward-looking information includes, among other things, statements with respect to Goldbrook’s mineral discoveries, plans, outlook and business strategy. The words “may”, “would”, “could”, “should”, “will”, “likely”, “expect,” “anticipate,” “intend”, “estimate”, “plan”, “forecast”, “project” and “believe” or other similar words and phrases are intended to identify forward-looking information.

Forward-looking information is subject to known and unknown risks, uncertainties and other factors that may cause Goldbrook’s actual results, level of activity, performance or achievements to be materially different from those expressed or implied by such forward-looking information. Such factors include, but are not limited to: uncertainties related to drilling results; the ability to raise sufficient capital to fund exploration; changes in economic conditions or financial markets; changes in prices for Goldbrook’s mineral products or increases in input costs; litigation, legislative, environmental and other judicial, regulatory, political and competitive developments; technological or operational difficulties or inability to obtain permits encountered in connection with exploration activities; and labour relations matters.

This list is not exhaustive of the factors that may affect our forward-looking information. These and other factors should be considered carefully and readers should not place undue reliance on such forward-looking information. Goldbrook disclaims any intention or obligation to update or revise forward-looking information, whether as a result of new information, future events or otherwise.
