NEWS RELEASE

Goldbrook Announces Camp Mobilization on June 13th, 2009

Vancouver, British Columbia – Goldbrook Ventures Inc. (“Goldbrook”) is pleased to announce that crews have started mobilizing to the company’s Belanger base camp in the western portion of its Raglan belt, Ungava, Quebec properties, as of June 13th. Senior geological staff and camp management personnel are arriving on site the week of June 15th followed by drill crews, other contractors and company geoscience staff. The exploration drilling program is expected to start about the end of June.

The 2009 Goldbrook program, in cooperation with project partner Jilin Jien Nickel Industry Co., Ltd. of Jilin China, will entail up to a 70-person exploration camp and have a budget in excess of \$15 million. The work will follow-up on the highly successful 2008 exploration, which resulted in the discovery of extensive nickel sulphides within the Mystery zone. Goldbrook staff and contractors will be supported with three helicopters and a Twin Otter, fixed wing aircraft all based out of the Belanger camp.

This year’s exploration program will include in excess of 15,000 metres of drilling; more than sixteen high priority targets have been selected for drill testing, most of which are new showings with geological and geophysical characteristics similar to previous discoveries at the company’s Mystery, Getty and Sylvie zones. In addition, there will be an extensive program of geological mapping and geochemistry to improve the company’s knowledge of the setting and characteristics of the ultramafic rocks in the property area. Goldbrook plans over 9000 line-kilometres of new VTEM surveys in three separate blocks within the northwest, northeast and southeast portions of their extensive tenure holdings. By previous company experience VTEM surveys have proven to be highly valuable and a key element to identifying new target zones for Raglan-style Ni-Cu-PGE sulphide mineralization.

Goldbrook has expended considerable effort over the winter months working with in-house geoscience staff, geological and geophysical consultants to review and analyze the company geophysical and geological databases and to compile geoscience data for the property. This work has identified a significant number of new targets for drill testing, particularly within the Mystery-Delta region. The planned drilling, geological and geophysical program will better define the Ni-Cu-Co-PGE sulphide potential within the company’s extensive Raglan nickel belt property holdings.

New geoscience tools will also be deployed to the Raglan property as part of this year's program. Goldbrook will utilize an *Innov-X Systems XRF Analyzer* in field operations. This sophisticated tool provides real-time analysis of metal content in rock, drillcore and other earth materials. The resulting data will assist drill planning, and most importantly provide immediate feedback of analytical results to the regional mapping, geochemistry and prospecting programs.

This aggressive, 2009 exploration program is planned to run from mid June through to mid September and results will be released as they become available and evaluated. The proposed exploration program is subject to change as results are obtained during the field season.

Brian Grant, P.Geo. (President & COO), Jamie Pardy P.Geo. (Goldbrook's Exploration Manager), and Ginette Carter, P.Geo. a consulting geologist to Goldbrook, are the designated Qualified Persons for Goldbrook Venture's Raglan Project. These individuals will supervise the drilling program, geological surveys and ensure quality control/assurance programs for the Raglan project during 2009.

ON BEHALF OF THE BOARD:

(signed) "Brian Grant, PGeo," President and COO
